Did You Know...

Researchers have found a link between music and spatial intelligence, which means that understanding music can help children visualize various elements that should go together, like they would do when solving a math problem. “We have good data that music instruction does reliably improve spatial-temporal skills in children over time,” explains Dr. Kyle Pruett, clinical professor of child psychiatry at Yale School of Medicine, who helped found the Performing Arts Medicine Association. These skills come into play in solving multistep problems one would encounter in architecture, engineering, math, art, gaming, and especially working with computers.
